Assignment 2: *6cm Object*

We were required to design and render an object that was no more than six centimeters in its longest direction in OpenSCAD. I made a candle. Unfortunately, I accidentally deleted my source code and .stl files while learning how to upload my files onto Github. So I only have my photo documentation of it. I printed it in PLA. I forget which printer I printed it on the first time (the smaller candle), but the final print came out very warped. I was told that it was due to the printer printing too fast.
